Liem Nguyen

Front-End Developer · React, TypeScript, Accessible UI

NguyenL4@outlook.com linkedin.com/in/krimson github.com/leithemaster

SUMMARY

Front-end developer with 6 years building web and mobile interfaces in React, TypeScript, Angular and React Native, including 3 years as a primary UI/UX designer. Builds accessible (WCAG, Section 508) UI and carries design intent all the way into production code.

EXPERIENCE

Independent, Front-End Development — 2024-Present

— Keeping front-end and accessibility skills current while job searching; designed and built a portfolio and resume site (see Projects).

Full Stack Developer, Sev1Tech — 2022-2024

NexGen at USCIS, an internal web application

— Built React and TypeScript UI components, feature enhancements and custom hooks.
— Improved the usability and performance of core features, bringing feedback from design reviews straight into the code.
— Connected the React front end to Spring Boot APIs, writing PostgreSQL queries and business logic when a feature crossed the stack.
— Shipped features through Agile sprint planning with GitLab, Docker and Jira.

UI/UX Designer, Geocent — 2019-2022

Internal support portal for Marines

— Led UI/UX design as primary designer, from user flows and wireframes to high-fidelity mockups.
— Tested UX decisions and iterated them with stakeholders across teams through to sign-off.
— Partnered with Angular developers through handoff, specifying HTML/CSS layout and component styling so the build matched the approved design.
— Reviewed every screen against Section 508, building accessibility into the design instead of retrofitting it.

Full Stack Developer, Fund Diet — 2018-2019

Winter Park, FL · Hybrid and native mobile apps

— Built and maintained hybrid and native iOS and Android apps in React Native using the MVVM pattern.
— Turned design and product ideas into responsive, polished interfaces, working directly with both teams.
— Delivered features on schedule across Agile sprints, using GitHub and Jira.

PROJECTS

Portfolio and resume site — 2026

— Wrote the design brief and art direction, then built a multi-page portfolio in semantic HTML and CSS with no framework: skip link, landmarks, reduced motion.
— Generated the site's isometric SVG drawings with a Node.js script that injects them into each page.
— Built this resume from a single HTML source with a print stylesheet that outputs the one-page PDF.

SKILLS

Front end	React, TypeScript, JavaScript, HTML, CSS, responsive design, Angular		
Accessibility	WCAG, Section 508, semantic HTML	Mobile	React Native (iOS, Android), MVVM
Back end	Spring Boot, PostgreSQL, API integration	Tools	Git, GitHub, GitLab, Docker, Jira, Scrum
Design	User flows, wireframes, high-fidelity mockups, usability testing, design handoff, Adobe XD		
AI-assisted	Claude Code, writing specs for coding agents, reviewing AI output		

EDUCATION

Mobile Development, Full Sail University · Winter Park, FL — 2018
